

Factsheet 3 of 4
Livelihoods

Disability is defined as interactions between personal and environmental factors. It is measured by the level of functioning of a person in various areas of daily activities (called “domains”) regardless of impairments, using the Washington Group tools.

UNEMPLOYMENT AND DISABILITY

Persons with disabilities are less likely to be working (p<0.05)

83.9%

compared to

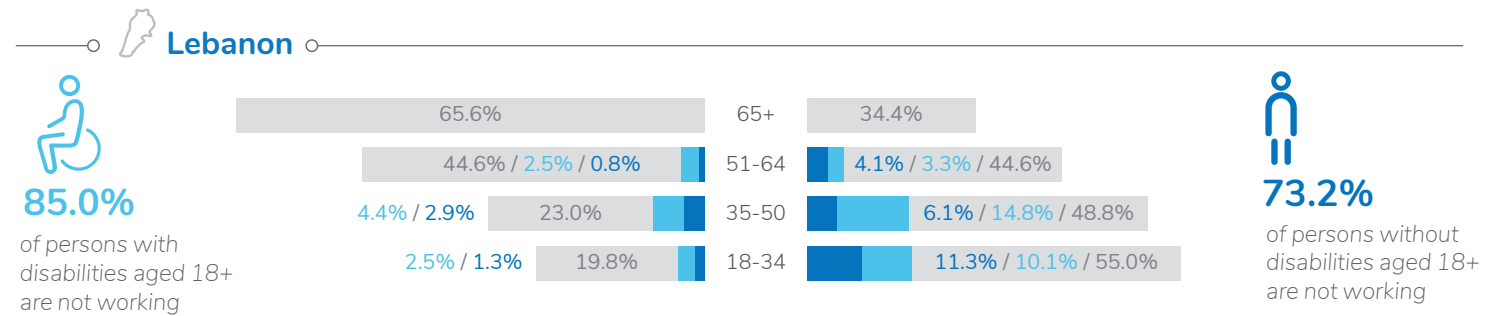

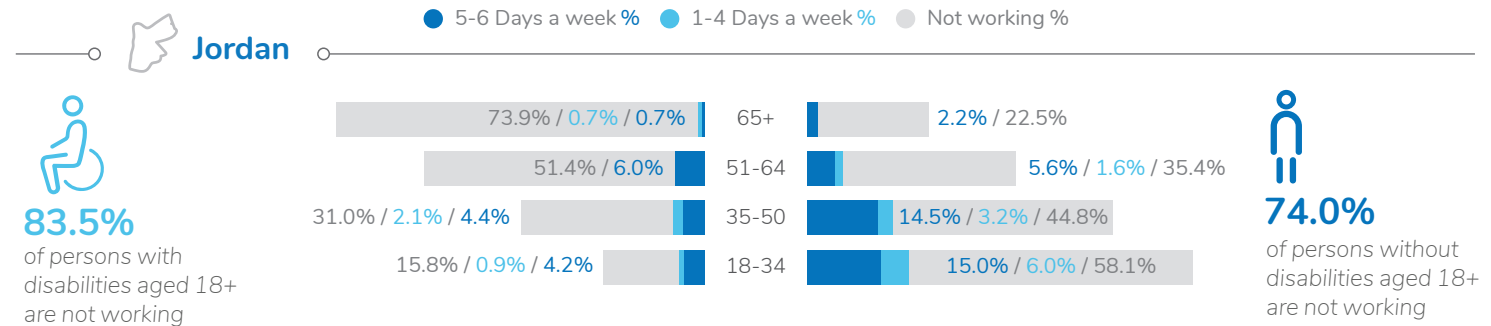

73.7%

of persons with disabilities aged 18+ are NOT working

of persons without disabilities aged 18+ are NOT working

Note: Length of the bar in below charts is proportionate to the percentage of persons with and without disabilities in each age group

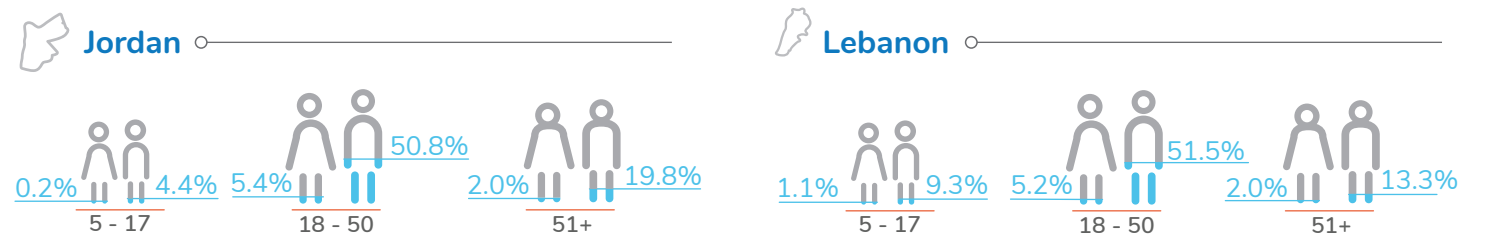

“Anxiety, depression, fatigue and seeing are common domains* where persons with disabilities aged 18+ who are working experience difficulties”

*Domains mean different activity areas for which the functioning of a person was measured by the Washington Group tools.

WORK, GENDER AND AGE

Percentage of persons with and without disabilities who are working 1-4 or 5-6 days a week, by gender and age
